No. 53 August 1947 Missoula, Montana

LUMBER PRODUCTION GAINS IN THE NORTHERN ROCKY MOUNTAIN REGION

By

M. B. Dickerman

Lumber production in 1946 was 1,227,326 M feet b.m. in the Northern Rocky Mountain Region. This was a gain of 12 percent over 1945. Of the three units in the region, North Idaho was first, cutting 630,012 M feet b.m.; Montana second, 415,421 M feet b.m.; and Northeast Washington third, 181,893 M feet b.m.

An outstanding trend during 1946 was the large increase in the number of active sawmills. In 1945 there were 444 active mills; in 1946, 708 - an increase of 59 percent! Some of these mills were idle in 1945 but by far the largest number represent additional sawmill capacity in the small mill classes. Most of these mills obtained their equipment from plants which had previously gone out of business, some migrated into the region from other areas, and a few purchased new equipment.

Number of active sawmills. % Increase 1945 - 1946 Percent	Number of Active Sawmills	Lumber production. % Increase 1945 - 1946 Percent
+ 60	Montana: 1945 = 253, 1946 = 405	+ 22
+ 59	North Idaho: 1945 = 131, 1946 = 208	+ 3
+ 58	Northeast Washington: 1945 = 60, 1946 = 95	+ 29
+ 59		+ 12

INT - FILE COPY

The increase in lumber production and in the number of active mills is accounted for by several factors. During 1946 the unprecedented demand for all species and kinds of lumber stimulated all mills to maximize their production. Although there were acute shortages of logging and milling equipment at the beginning of the year, more equipment gradually became available. Disputes between labor and management, which greatly curtailed production in 1945, did not hold down production in 1946. Weather was favorable. Labor became more plentiful. Elimination of price control measures the latter part of the year removed a restraining influence for high-cost producers.

Tables I and II attached give by states and the region detailed statistics on lumber, tie, lath, and shingle production for 1946. In addition, lumber production is shown by species and by mill classes. Data on which these tables are based were collected by the Northern Rocky Mountain Forest and Range Experiment Station 1/ in cooperation with the Bureau of the Census. The figures given are preliminary; final results will be published by the Bureau of the Census.

1/ The following members of the Division of Forest Economics participated in the collection and compilation of the data: P. N. Holmes, A. B. Evanko, E. W. Smith, H. J. Pissot, and M. E. Metcalf.

TABLE I

PRODUCTION OF LUMBER, LATH, AND SHINGLES - 1946

NORTHERN ROCKY MOUNTAIN REGION

(Compiled by the Northern Rocky Mountain Forest and Range Experiment Station, Missoula, Montana, in cooperation with the Bureau of the Census, U. S. Department of Commerce. The statistics presented in this summary are preliminary tabulations of complete returns. Final data will be issued by the Bureau of the Census.)
